Profile

I am a B.Tech Computer Science student who enjoys building real-world tech projects. I have worked on both web-based and desktop applications using C, C++, and Java. I enjoy solving problems through code, system design, and teamwork. I am responsible, curious, and always open to learning.

Education

Graphic Era Deemed to be University, Dehradun

2023–2027 (7th Semester)

Bachelor of Technology (B.Tech)

Delhi Public School, Daulatpur

Class 12th, (completed year-2023)

Class 10th, (completed year-2021)

Skills

Programming Languages: C, C++, Python, Java, HTML, CSS, JavaScript.

Concepts: Data Structures Algorithms, OOP, DBMS, Operating Systems, Compiler Design, Cybersecurity Basics.

Soft Skills: Quick learner, problem solver, adaptable, collaborative.

Projects

Firewall Simulator

- Developed a GUI-based firewall simulator to monitor packets and block network traffic based on custom firewall rules.
- Implemented features like rule validation, traffic logs, and import/export functionality for firewall configurations.
- Designed an interactive interface to manage firewall rules and monitor blocked or allowed traffic.
- **Tools Used:** Python, Scapy, Tkinter.

MiniLang Analyzer - Compiler Design Project

- Developed a mini language analyzer project to understand different phases of compiler design such as lexical analysis, syntax analysis, semantic checking, and intermediate code generation.
- Implemented token generation, grammar validation, and error detection using C programming.
- Generated parse trees and Three Address Code (TAC) for intermediate code representation.
- Created a simple Java Swing-based IDE interface to write and test code for the custom language.
- **Tools Used:** C, Java Swing, Compiler Design Concepts.

Online Grocery System for Local Stores

- Developed a full-stack grocery management system for local stores with features like product listing, cart management, order handling, and customer address management.
- Built separate dashboards for store owners and customers to manage products, orders, and store operations efficiently.
- Implemented backend APIs and database connectivity using Node.js, Express, and MySQL.
- Added product image upload functionality and organized the project using route-based backend structure.
- **Tools Used:** Node.js, Express.js, MySQL, HTML, CSS, JavaScript.

Warehouse Management System

- Developed a Java-based desktop application to manage warehouse inventory, stock levels, and product locations.
- Implemented Dijkstra's Algorithm to calculate shortest paths for efficient navigation inside the warehouse system.
- Organized the project using the MVC design pattern to improve code structure and maintainability.
- Designed a GUI using Java Swing for managing warehouse operations and product records.
- **Tools Used:** Java, Java Swing, Dijkstra's Algorithm.

Awards & Certifications

- AWS Certified Cloud Practitioner.
- Google Cloud Computing Foundation Certificate.
- Build a Secure Google Cloud Network.
